RESEARCH STATEMENT

My research investigates the processes that generate submarine geohazards in volcanic and tectonic environments, with a focus on explosive eruptions, mass-wasting events, and associated tsunami risks. I integrate multiscale geophysical imaging, core-log-seismic integration, and geochemical analysis to reconstruct eruptive dynamics and assess hazard potential in regions where direct observations are limited but societal relevance is high.

KEY RESEARCH CONTRIBUTIONS

- **Led seismic-to-core integration for IODP Expedition 398**, uncovering previously unrecognized explosive eruptions, volcano-tectonic interactions, and redefining the volcanic-hazard model for the Aegean.
- **First author of seven peer-reviewed publications** (e.g. *Nature Geoscience*, *Geology*, *Tectonics*) with three additional first-author manuscripts in revision, and co-author on 17 published papers plus eight more currently under review or in revision.
- **Chief or co-chief scientist and participant in 20+ international expeditions**, across the Mediterranean, Atlantic, Red Sea, Ross Sea, and West Pacific, leading seismic acquisition, sediment coring, and hazard-focused investigations, totaling >19 months at sea.
- **Award-winning science communicator**, KlarText Prize laureate; featured in *National Geographic*, major European media, and the documentary *The Santorini Code*.
